

Tiny Turtle Take-off

INSTRUCTIONS: Here on our beaches, turtles make nests to hatch their babies. But plastic and other rubbish washed up or left on the beach can harm baby turtles as they try to get to the ocean. Help guide this baby turtle safely across the beach for its first ever swim!

HELPFUL TIP: Using reusable water bottles, straws and bags, and disposing of your rubbish correctly can help reduce litter on our beaches. If you want to do more, ask a grown-up about taking part in an organised beach clean-up!

START

Uh oh, the baby turtle could get hurt by a plastic straw sticking out of the sand. Time to find another way!

Gulp! The baby turtle thought this plastic bag was a jellyfish and wants to eat it. Turn back now!

Watch out, the baby turtle will get tangled in the fishing net if you go this way. Don't give up, you're nearly there!

FINISH

You did it!
You helped the baby turtle get to the ocean safely!

Did you know?

Turtles lay their eggs on beaches across Moreton Bay, Sunshine Coast and Noosa between November and January, with baby turtles hatching six to eight weeks later from January to March.
